

Arush Bodla

571-639-8077 | abodla@umd.edu | arushbodla.org | github.com/ArushNo1

EDUCATION

University of Maryland – Banneker/Key Scholar

B.S. in Computer Science (Cybersecurity)

Academies of Loudoun

Academy of Engineering & Technology, Computer Science Pathway — GPA: 4.0/4.0

College Park, MD

Aug. 2026 – Present

Leesburg, VA

Aug. 2022 – June 2026

EXPERIENCE

ManTech — DFEND Program

Digital Forensics Intern

Herndon, VA

June 2026 – Aug. 2026

- Performed static and dynamic reverse engineering with Ghidra and gdb on encrypted, self-modifying binaries and custom file formats to assess data recoverability without source keys
- Conducted mobile forensic analysis on Android applications and encrypted databases using APKTool, ADB, and manual decompilation to recover protected artifacts
- Reviewed findings with mentors and presented technical methodology; preparing a capstone presentation and team-based technical assessment for program leadership

ACL Competitive Programming Club

Co-Founder & Tournament Director

Leesburg, VA

Sept. 2023 – June 2026

- Organized ACL-IT, a 100+ attendee informatics tournament, managing a \$3,900 budget end-to-end
- Deployed and scaled DOMjudge infrastructure on AWS, processing 500+ verdicts in 3 hours during live competition
- Delivered biweekly lectures on algorithms and data structures to 50+ students

John Champe CyberPatriot

Co-Treasurer & CTF Competitor

Aldie, VA

Aug. 2022 – June 2026

- Developed a 4,000-line Linux hardening automation script, contributing to an All-Virginia 1st place finish and 13th/4786 Nationwide
- Managed a \$3,000+ team budget and grew program participation from 15 to 75 students
- Led weekly training sessions on system hardening, network defense, and CTF strategy

PROJECTS

RegiMon | *Rust, React, Tauri, Win32 API, GitHub Actions*

Aug. 2025 – Present

- Built a real-time Windows registry monitoring tool using the Win32 RegNotifyChangeKeyValue API to detect malware persistence with zero polling overhead
- Implemented recursive change tracking, one-click rollback, and privilege-aware admin elevation for HKLM/HKCR key access
- Curated a security-relevant key set covering autorun, browser hijack, and credential store locations; successfully mitigated the LoveBug virus
- Set up CI/CD with GitHub Actions for automated build and release

ACL-OJ | *Next.js, TypeScript, Supabase, Judge0*

Aug. 2025 – Present

- Built a full-stack competitive programming judge supporting Python, C++, and Java, with real-time verdicts via Supabase Realtime and Judge0 execution
- Designed timed-contest infrastructure with live leaderboards and a Codeforces-style rating system to preserve competitive integrity without relying on AI-detection tools
- Implemented LaTeX-rendered problem statements, submission history, and an admin panel for problem/contest management

AWARDS & HONORS

- **IIOT Team USA** — Selected as 1 of 4 students nationally to represent the USA at the International Informatics Olympiad in Teams
- **National Cyber League** — 4th Place Nationally, High School Division (2025 Spring & Fall)
- **Competitive Programming** — **USACO Gold**, 1st place Philadelphia Classic, WWPIT

TECHNICAL SKILLS

Languages: C++, Java, Python, C#, TypeScript, JavaScript, Bash, Rust

Frameworks & Tools: React, Next.js, Tauri, Supabase, Win32 API, AWS, Judge0, Git, Unity

Security: Ghidra, gdb, APKTool, ADB, CTF/RE, System Hardening
